Production of Steel

Measurement, Control and Mechanization in Metallurgy.
M. Ktežík and A. Winkler. (Hudnické Listy, 1953, 8, (11),
578-581). [In Czech]. The prerequisites for fuller instru-
mentation of metallurgical processes in foundries and steel-
works are discussed. Remote control and choice of suitable
equipment are considered. The parameters measured on
fully equipped Russian blast-furnaces and open-hearth fur-
naces, and overall fuel control by steelworks are listed. --P. F.

Reaction of antigen with incomplete antibody. Alojz Winkler, Stefan Hupka, Ctirad Oravec, and Irena Winklerová (Výzkumný ústav onkologický, Bratislava, Czech.). Chem. Listy 49, 1075-82 (1955).—A specific reaction of the antigen with an incomplete antibody was studied. As a reaction criterion was used the increase in the mol. wt. of a mixt. of horse-serum albumin and homologous ram-serum globulin above the expected value. A nonspecific interaction of horse-serum albumin with nonimmune-ram globulin was noticed, much slighter than that with immune-ram globulin. M. Hudlický

Title : Treatment of Chronic Leukemia with Myleran
Orig Pub : Bratislav. lekar listy, 1957, 2, No 10-11, 677-683

Abstract : The results of myleran treatment are reported in 16 patients with chronic myelogenous leukemia. In 14 patients a considerable improvement, prolonged remissions (5-16 months), drop in the leucocyte count to normal, disappearance of immature elements from the blood, increase in the quantity of hemoglobin and an essential reduction in the size of the spleen were observed. The general condition of the patients also improved; they gained in weight. Often, patients had been unsuccessfully exposed to X-ray therapy and treatment with the preparation TS-160 or P32

Title : The Mechanism of Action of Myleran

Abs Jour : Neoplasm, 1957, 4, No 4, 340-344

Abstract : A study was made of the excretion of uric acid in patients with chronic myelogenous leukemia treated with myleran (I). The intensity of uric acid excretion was evaluated by the quantity of it contained in a 24-hour urine sample. In some patients in the interval between the 10th and 20th day after beginning the injection of I a reduction occurred in the leucocyte count in the blood accompanied by a decrease in the urine uric acid. For other patients a slow reduction in the leucocyte count, the absence of any effect on the spleen and a

149. *The level of 6-azauracile in the serum of rats* WINKLER A., UJHÁZY V., KNORZOVÁ K. and ŠORM F. *Oncol. Res. Inst., Bratislava* *Neoplasma* 1958, 5/2 (97-100) Table, 2

The content of 6-azauracil in the serum of rats at different intervals after i.m. injections in oil suspension was determined by chromatographic isolation on filter paper, elution and measurement of the absorption at λ_{258} . The level attained a maximum (of ca. 19 mg./100 ml.) 4-8 hr. after injection of 500 mg./kg. and fell rapidly after 18 hr. After a 2-hour interval the injection of 300 mg./kg. resulted in a level of 16.5 mg./100 ml. and this was not increased by greater doses.

TITLE: Applications of the Hunor 131 [desk computer] in geodesy

SOURCE: Geodezia es kartografia, no. 3, 1966, 191-194

TOPIC TAGS: computer application, geodesy, computer/Hunor 131 computer

ABSTRACT: The Hunor 131 electronic desk computer was introduced in 1966 by its manufacturer, Electronic Measuring Instrument Works (Elektronikus Merokeszulekek Gyara) [location not given]. The device is fully transistorized, operates at 220 V, weighs 23 kg., has dimensions of 51 x 48 x 23 cm., consumes 95 Watts, has 11 digit keys and 11 operational keys. It can add, subtract, divide, and multiply, and perform combined operations based on these. It has a capacity of 13 digits. Its geodetic applications include the calculation of the directional tangent, area calculations, resection, presection, and the like. It is not suitable for calculations involving the summation of partial products. A new model with increased capacity is under development. Orig. art. has: 3 figures. [JPRS: 36,844]

Title : Clinical Experiment in the Use of Sanamycin in Advanced
Hodgkin's Disease.

Orig Pub : Bratisl. lekar. listy, 1957, 37, No 1, 26-29.

Abstract : This is a communication on the use of sanamycin in 15 cases of advanced Hodgkin's disease in dosages between 100 and 200 gamma given I.V. twice a day, the total dose per course of treatment being 10-15 mg. In the majority of the patients there were side effects, such as ulcerative stomatitis, glossitis, etc. which were explained by the deficiency in group B vitamins. There was improvement in 3 patients lasting from 5-10 weeks. A transient effect was noticed in 10 cases, a prolonged remission in one case of combined treatment, and there was no effect in one case. The authors recommend that sanamycin be used in generalized forms of Hodgkin's disease (with depressed functions of the bone marrow) which are refractory to other forms of therapy.

Winkler, R.

Substances of *Cnidium autumnale* and their derivatives.
 XXXV. The structure of *deaneocoline* (substance F) from *Cnidium autumnale*. R. Šantavy, R. Winkler, and T. Reichstein (Univ. Olomouc, Czech.) *J. Prakt. Chem.*, 1952, **36**, 1319-24 (1952) [in German]; cf. *C. A.* 47, 4325. Since substance F shows a ratio between antimotile and toxic doses favorable to clinical use, a short trivial name, *deaneocoline* (I), is suggested and its structure is investigated. The presence of a MeNH_2 group is indicated by the following reasoning: (1) Analysis, absorption spectra, the physico-chemical properties, and its occurrence in nature with colchicine (II) show the similarity between I and II; (2) its basic nature shows no acetylated N; (3) its mol. formula has one CH_2 more than the mol. formula of deacetylcolchicine. The exptl. proof rests upon the production of NH_2 from II and MeNH_2 from I under analogous conditions (cf. Zeiss, *Amonist*, 9, 1 (1888)). II (100 mg.) is heated 12 hrs. in a sealed tube with 3 cc. concd. HCl at 170° . The mixture with BaO , the ash layer made alk. (5 cc. slowly) and the distillate acidified with HCl (Congo red indicator) and distilled, is passed to leave 10 mg. colorless crystals; these dissolved in 0.5 cc. H_2O and shaken 15 min. in the cold with 0.15 cc. $\text{BrCH}_2\text{CH}_2\text{Br}$ and 3 cc. 2*N* NaOH yield from the Br_2O ext. 11 mg. BaNH_2 , m. 127-8°, identified by mixed m.p. Upon similar treatment, 106 mg. I yields 12 mg. MeNH_2Cl and then, 13 mg. H_2NMe_2 , m. 79-80°, identified by mixed m.p. The *N*-formyl (III) and *N*-Bz derivs. (IV) of I are prep'd. (for comparison, I (200 mg.) in 2 cc. abs. pyridine is treated at -10° with a mixt. of 1.5 cc. airy HCOCl and 0.6 cc. Ac_2O , let stand 2 hrs. at 20° , disint. in mecio, and the CHCl_3 soln. of the residue washed, dried, and evap'd. Evap'ing 275 mg. III, m. 188° (from $\text{MeOH-Br}_2\text{O}$ and MeCO-CO_2 (1:1:1), m. 188° (from H_2O and Br_2O), m. 188.5 \pm 2° (6.74%), CHCl_3). Similarly 300 mg. I in 10 cc. abs. pyridine with 0.7 cc. $\text{BrCH}_2\text{CH}_2\text{Br}$ gives 300 mg. crud. IV, which, chromatographed on Al_2O_3 , yields rate yellow prisms, m. 210-11° (from $\text{AcOEt-Br}_2\text{O}$, m. 245.7 \pm 2° (cf. 0.907, ClICH_3 , sol. in Br_2O , CHCl_3 , AcOEt , H_2O and H_2O_2). The known $\text{N,N}'$ -leav. (V) of I, prep'd. for analysis, m. 230-1°, m.p. -210.8 ± 1 (cf. 1.9163, ClICH_3). III is related to substance B (S. and R. *C. A.* 45, 2152) as V is to II. R. S. French

Title	: Modification of the Kjeldahl Method for the Determination of Nitrogen	
Orig Pub.	: Prumysal Petravin, 9, No 9, 498-499 (1958)	
Abstract	: The Kjeldahl digestion method has been used for the determination of N in biological materials. The N in the solution after the digestion is determined by the use of the Nessler reagent. 10 ml of the diluted digested solution are treated with 0.5 ml of Nessler reagent and 0.2 ml of Rochelle salt, prepared by the Winkler method. The solution is analyzed photometrically at 428 μ after 5 min. The calibration curve is constructed using an NH_4 solution. The Beer law is observed for N

Reaction of antigen with incomplete antibody. Alojz Winkler, Štefan Hupka, Ctirad Oravec, and Irena Winklerová (Výzkumný ústav onkologický, Bratislava, Czech.). Chem. Listy 49, 1075-82 (1955).—A specific reaction of the antigen with an incomplete antibody was studied. As a reaction criterion was used the increase in the mol. wt. of a mixt. of horse-serum albumin and homologous ram-serum globulin above the expected value. A nonspecific interaction of horse-serum albumin with nonimmune-ram globulin was noticed, much slighter than that with immune-ram globulin. M. Hudlický

"Observations on the Effect of High Pasture Temperature on the Milk and Meat Production of Cattle."

Warsaw-Lublin, Medycyna Weterynaryjna, Vol 19, No 2, Feb 63, pp 113-114.

Abstract: [Authors' English summary modified] Authors' studies on the effect of hot weather on cattle revealed that milk production in cows decreases in hot weather and that this decrease is related to the normal productivity of the cow (drop greater in higher producing cows). Gain of body weight was positive for lean cows and negative for heavy ones. Of the 13 references, two are Polish, one Hungarian, and the others in the English language.

During a period of 10 months, 49 children were treated (35 meningitic and 14 miliary cases). Of these, 11 children died, 2 suffered relapses. The longest period of observation lasted 11 months. The optimal dosage of streptomycin has not been determined with sufficient precision. In every case the dosage depends on the course of the disease and the streptomycin tolerance of the child. Possibility of relapses makes constant observation necessary for long periods after cessation of the treatment.
